

SESSION 1 · THE PERFECT PROMPT FORMULA

The “Perfect Prompt” Formula

Making AI do EXACTLY what you want — not what it thinks you want!

“The difference between Meh and WHOA!”

Persona

Task

Context

Format

Session Roadmap

Four Parts · 60 Minutes

Part 1 · 15 min

Why AI needs clear instructions — it is a smart helper, not a mind reader

Part 2 · 15 min

The Magic Formula —
Persona, Task, Context,
Format (PTCF)

Part 3 · 15 min

Before & After — turning
a lazy prompt into an
amazing one

Part 4 · 15 min

Activity — the Literal
Robot Challenge + tips
and common mistakes

Session goal:

By the end, you will know how to write a prompt that makes AI do **exactly** what you imagine.

Here's the Thing About AI...

Smart Helper, Not a Mind Reader

✗ NOT a Mind Reader

AI is terrible at guessing what you mean. If you are not clear, it just guesses!

✓ A SUPER Smart Helper

AI is amazing at following instructions — when you give clear ones.

Example: “Clean your room”

 **Your way:** organized, decorated, smells nice

 **Robot way:** THROWS EVERYTHING IN THE BATHTUB!

Remember:

The robot did what you **said**, not what you **meant**. That is why instructions matter!

What Happens Without Instructions?

BAD PROMPT:

“Give me an idea for a 3D game.”

AI's Brain:

“They want a game? In 3D? Okay, here is... generic game idea #47 that you have seen 1,000 times.”

Result:

BORING! MEH! SO GENERIC! 😞 — because the AI had nothing to work with.

Introducing the Magic Formula

PTCF — Your Four Superhero Powers

The Formula:

 **PERSONA** +  **TASK** +  **CONTEXT** +  **FORMAT** =  **AWESOME!**

P = Persona

Tell AI WHO to pretend to be

T = Task

Tell AI exactly WHAT to make

C = Context

Give AI the story around your request

F = Format

Tell AI HOW to give you the answer

Coming up:

Let's learn what each power does, one by one! 

P = Persona

Give AI a Job Title!

What it means:

Tell the AI **WHO** it should pretend to be.

Example: "Act as an expert game designer."

Focuses the brain

Points AI's brain at the right job

Acts professional

Makes AI answer like an expert

Way cooler

Much better than asking randomly

✗ Goldfish

Asking a goldfish for cooking advice — it won't work!

✓ Chef

Asking a chef for cooking advice — MUCH better!

T = Task

Tell AI What to BUILD!

What it means:

Be **SUPER specific** about what you want.

✗ Too vague:

“Give me a game idea” — a basketball game? board game? video game? 🤔

✓ Specific:

“Pitch a **3D maze explorer game**” — EXACTLY what you want! 🎯

🎯 The Rule:

The more **specific** you are = the **better** the answer you get.

C = Context

Give AI the STORY Around Your Request

What it means:

Add the extra details that matter!

Example: "...designed for kids, where the player uses gravity mechanics."

WHO will use it?

Kids!

What is special?

Gravity mechanics!

What makes it different?

Not just another boring game

✗ No context:

"I want a superhero movie"

✓ With context:

"I want a superhero movie **set in space, with comedy and dinosaurs**" 

F = Format

Tell AI HOW to Give You the Answer

What it means:

Say **EXACTLY** how you want the answer presented.

Example: "Give me a 3-point bulleted list of core features."

You can ask for...

A list, a paragraph, a poem, a comic strip, a table, even a joke!

100

Same info, new style

The same information can come in totally different styles

You are basically saying:

"Don't just tell me stuff... tell me in **THIS way!**"

The BEFORE and AFTER 🤖

Side-by-Side Comparison

❌ LAZY PROMPT:

“Give me an idea for a 3D game.”

✅ THE FORMULA PROMPT:

“**Act as an expert game designer** (Persona). **Pitch a 3D maze explorer game** (Task) **designed for kids where the player uses gravity mechanics** (Context). **Give me a 3-point bulleted list of core features** (Format).”

Generic → Specific

Every part of the prompt now has a job

Boring → AMAZING

The answer will be built just for you

“Meh” → “WHOA!”

That is the power of the formula

Activity Time!

The Literal Robot Challenge

1. Think of something cool you want to create

A song? A story? A game? A picture?

2. Use the PTCF formula to ask for it

Persona + Task + Context + Format

3. See how MUCH BETTER the answer is!

Compare it with a lazy one-line prompt

A song about pizza

Make it silly and rhyming

A zombie story

Funny, not scary!

A pizza place on the moon

Design the menu

A T-Rex who learns to code

Tiny arms, big dreams

The Big Takeaway

Remember This!

 **AI Cannot Read Your Mind** 

 **Your brain:** full of amazing ideas

 **AI's brain:** “Tell me MORE! Be specific!”

The secret:

The better your instructions = the better your results. It is not magic... it is **SPECIFICITY!** ✨

The PTCF Quick Reference

Copy This Pattern!

"Act as a **[PERSONA]**. Create **[TASK]** for **[CONTEXT]**. Format it as **[FORMAT]**."

Artist

Creating pixel art of a dragon, for a video game, as a list of steps

Teacher

Writing a funny story about robots, for 4th graders, in comic format

Musician

Composing silly lyrics about math, for kids, in a rhyme scheme

Common Mistakes

Don't Be This Person...

✗ “Give me a story”

Too vague — AI will guess.

✓ Better:

“Write a funny 3-sentence story about a talking taco, for 2nd graders.”

✗ “Make me an image”

An image of what?!

✓ Better:

“Create a picture of a robot unicorn riding a skateboard on the moon.”

✗ “I need ideas”

Ideas about anything?

✓ Better:

“Give me 5 creative ideas for a treehouse that has superpowers.”

Session 1 Key Takeaways

The PTCF Formula

Persona + Task + Context + Format = the perfect prompt

Specificity is the superpower

The more specific your prompt, the better the answer

AI listens to instructions, not minds

When you get a “meh” answer, ask: how can I be MORE specific?

Your new mindset

“OH! I just need to be more specific — that’s so easy!”
